AI TEACH

May, 2024

About the project

AI-teach -Artificial Intelligence for primary school teachers is a 1 year Cooperation Partnership project in School Education, funded by the Erasmus+ Programme.

The **main project objective** is to improve the understanding of the potential challenges and opportunities related to the appropriate, responsible and interdisciplinary use of AI-driven tools in primary education. The results will contribute to more innovative teaching and learning practices as well as facilitating the transition to digital transformation in primary schools.

Latest News

The handbook is now a work-in-progress, all partners have produced and reviewed the contents. It will be published soon.

An international training course was held in Italy from 15th to 19th of April and it involved all project partners.

AI TEACH

Kick-off meeting

On December 4th 2023, the project partners finally met in person in beautiful Prague. The meeting was organized by the Czech partner Aklub. It allowed participants to agree on the next steps of the project and to discuss and analyze the results of the focus groups that took place online in November.

In November 2023 each country gathered together teachers' needs regarding resources, tools, and methodologies for implementing AI-based activities in the classroom. The results guided the creation of the Handbook.
